You have correctly selected 1.

The correct answer is: Gossip around the coffee machine, Linking graduate recruitment program to rotations through the company, Personal use of Facebook

## Question 2

Complete

Mark 3.0 out of 5.0

The idea of data creating business value is not new, however, the effective and appropriate use of data from data collection through to publishing is becoming problematic.

Explain security and quality considerations and concerning data storage

This will be marked off-line. (5 marks).

Security Considerations:

- User provided content;
- Ensuring the data of an individual is protected;
- The possibility of jigsaw reidentification i.e., where multiple data sources combined together can provide confidential information on a person or persons.
- Prevention of unauthorised access to the data;
- Prevention of changes to the data i.e. misinformation;
- Encryption measures.

Quality Considerations:

- Accuracy of the data;
- Where the data is coming from?
- How is the data obtained?
- Ensuring that the data is relevant for the purposes of which it is being collected for.

Data Storage:

- How to store the data?
- Scale-up and speed-up measures of the data storage system;
- 

Comment:

Security – What security policies are in place based on the sensitivity and usage of the data? For example, any data that is admissible in court needs to be stored in a hardened environment, with strict rules around the access and changing of the data. How is data and metadata stored securely (eg. Encrypted), backed up securely (tapes stored in secure vaults) etc.

Quality – What have we done to build a resilient data storage ecosystem – from the granularity of data stored, data aging strategy (based on legal/business needs), quality and resilience of the hardware etc

**Question 3**

Correct

Mark 1.0 out of 1.0

Select one:

- ☒ a. proprietary knowledge ✗
- ☐ b. literacy works

Your answer is incorrect.

The correct answer is: literacy works

**Question 9**

Complete

Mark 3.8 out of 5.0

What is location tracking? This will be marked off-line

Location tracking is effectively knowing where an individual or object is located at any given time. For example, iPhones have a feature called "Find My Phone" whereby a user can locate the general vicinity of where their electronic device (doesn't just apply to iPhones, applies to products such as the iPad, or AirPods) is located. Another system of this that is available is the "Find My Friends" feature - albeit in this scenario, the individual must have approved access to another user to know where they are, this feature can be misused by someone to know where an individual is at all times, e.g. a jealous boyfriend/girlfriend.

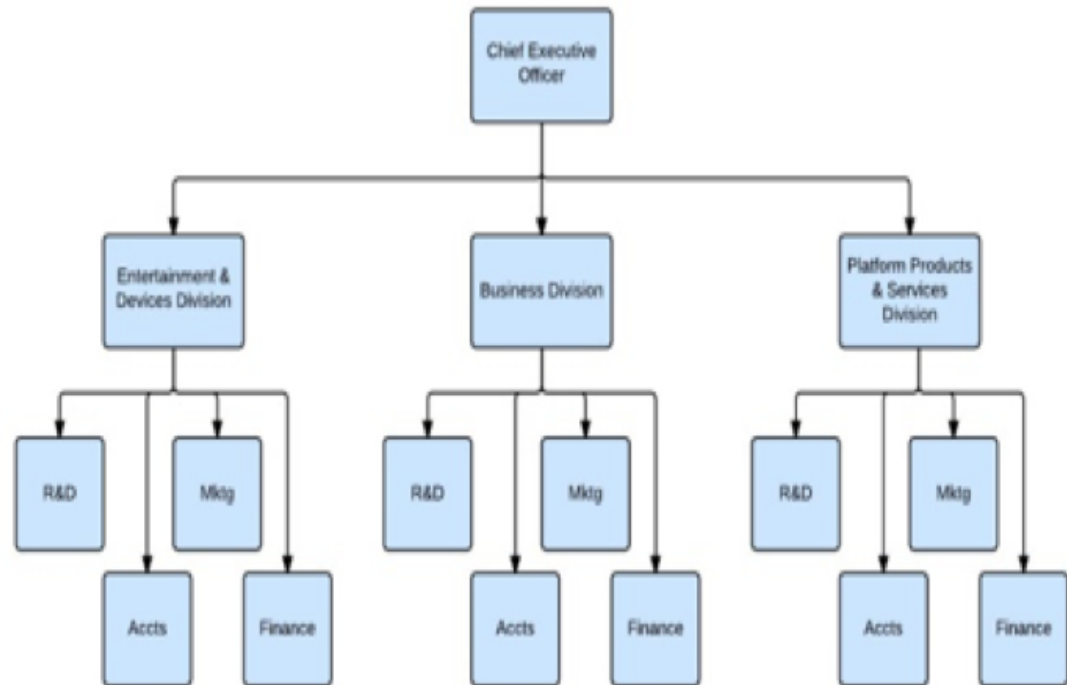

Comment:

**Location tracking** refers to technologies that physically locate and electronically record and **track** the movement of people or objects. **Location tracking** is not one, single **technology**. Rather, it is the convergence of several **technologies** that can be merged to create systems that **track** inventory, livestock or vehicle fleets. Similar systems can be created to deliver **location**-based services to wireless devices.

**Question 10**

Correct

Mark 1.0 out of 1.0

Select one:

- ☐ a. Click here if this is a matrix organisation structure
- ☒ b. Click here if this is a divisional organisation structure ✓
